Chennai, Tamil Nadu

## SUMMARY

In my company I have implementing my best skills to find out and fix errors, bugs and issues in our ERP Retail Software. With my SQL skills I took any required data from the database with my queries. And I have also monitored the necessary things working properly or not to make our ERP software to function properly. For now my goal is to reprise my career as a full stack developer or any web based developer. Motivated aspiring Backend Developer with a solid foundation in Node.js, Express.js, EJS, and REST API development. Committed to building efficient and scalable web applications, with a keen interest in enhancing coding skills and exploring new technologies. Eager to contribute to innovative projects and collaborate in a dynamic team environment.

## EXPERIENCE

### ERP WEB and SQL Developer

#### TenthPlanet

01/2022 Present

Chennai, Tamilnadu

- I have been working as an ERP Web and SQL Developer in Tenth Planet Technologies for two years.
- There is a Adempiere ERP project, we provide this software for retail industry. In this I have worked in developing HHT website application and database management.
- This website reduces our clients work load. We have established a connection with our backend database in that HHT website and user can retrieve the required details.
- This website is used to load the product details by simply scanning the barcode of the product. So that it will help the user to save their time. This HHT is used to retrieve the required product information from our backend database to process IBT (inter branch transfer), stock transfer, stock update, batch update and stock adjustment.
- And then I used to work with database management. In that I will be developing queries to create, insert, update, join, select, alter, drop and delete tables.
- In our ERP software if there is any bugs, issues ETC, then I have developed certain queries to get rid of any table data from our database, which will help us to sort out the issues

## PROJECT

### PVFLIX

- Conceptualized and developing a video streaming platform to deliver personalized content to users.
- Built a robust backend using [technologies, e.g., Node.js, Django] for user authentication, content management, and data storage.
- Implemented video playback functionality with adaptive streaming techniques to optimize user experience across various device
